🛡️ TARA Helper - ISO/SAE 21434 Threat Analysis Assistant

Version: 1.0.0
Last Updated: January 15, 2024
Compatible with: Microsoft Edge (Chromium-based)

Overview

TARA Helper is an intelligent browser extension that accelerates automotive cybersecurity threat analysis and risk assessment (TARA) by automatically extracting, structuring, and pre-populating ISO/SAE 21434-compliant threat scenarios from security reports, advisories, and technical documentation in real-time.

✨ Key Features

- **Intelligent Content Analysis**: Automatically identifies assets, threats, attack paths, and controls from web pages
- **ISO/SAE 21434 Compliance**: Generates threat scenarios aligned with ISO/SAE 21434 standards
- **Attack Feasibility Calculator**: Calculates attack feasibility based on ISO 21434 criteria
- **Interactive Highlighting**: Color-coded page highlighting for identified elements
- **Comprehensive Sidebar**: Full analysis panel with tabbed interface
- **Export Capabilities**: Export analysis as JSON or CSV
- **Risk Assessment**: Automated risk level determination
- **Control Recommendations**: Suggests appropriate cybersecurity controls

📋 Prerequisites

- **Microsoft Edge** (version 88 or later) - Chromium-based
- **Operating System**: Windows 10/11, macOS, or Linux
- **Permissions**: Active tab access, storage, side panel

🚀 Installation Instructions

Method 1: Load as Unpacked Extension (Development Mode)

1. **Download/Clone the Extension**

```
git clone https://github.com/your-org/tara-helper-extension.git
cd tara-helper-extension
```
